# If you are going to insulate, use the best... Rockwool

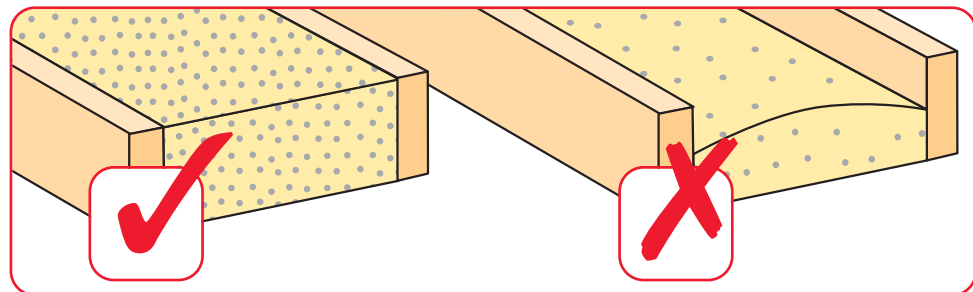

Rockwool insulation provides a unique combination of benefits

## ✓ Sustainable Insulation

Installing Rockwool insulation reduces energy consumption. Made from a naturally-occurring raw material, Rockwool produces one of the most sustainable insulation products available.

## ✓ Exceptional Thermal Insulation

Is the old insulation in your loft much thinner than when first installed? Avoid this by using Rockwool insulation which is denser than ordinary lightweight insulation. This gives a tighter fit and doesn't slump or shrink with time, ensuring that it is effective for the lifetime of your home.

Slumping insulation is less thermally effective

## ✓ Outstanding Fire Insulation

Fire is a major hazard in any home. Rockwool is made from rock and not glass or combustible plastic foam. It will not melt, burn or give off toxic fumes in a fire.

Naturally non-combustible

## ✓ Excellent Sound Insulation

Because it is dense and close fitting, Rockwool is an exceptional sound insulation.

Rockwool also has the added benefit of being water repellent.
